Title & Subtitle

How to Detect and Handle Outliers in Python: A Practical Guide

1. Title and Subtitle

Main Title: Keep it clear and direct, focusing on the value or solution.

Subtitle: A line that explains the target audience or the direct outcome.

Cover Image (Hero Image): A high-quality image (via the Unsplash built into Medium) with source credit, or a prominent architectural diagram created by the student.

2. The Problem

Introduction (maximum two paragraphs): What is the real problem this article solves? And why are traditional methods time-consuming or ineffective?

What you'll learn: Three to four specific points (bullet points) that illustrate what the reader will take away by the end of the article.

3. Concept & Architecture

A concise and simplified explanation of the theoretical concept without unnecessary detail.

Diagram/Architecture Workflow: A visual representation of the data flow or project architecture (flowchart or pipeline).

4. Step-by-Step Implementation

Break down the code into small, logical steps (avoid putting the entire code file in one go).

Use code blocks with the correct formatting, or include GitHub Gist links.

Explain what each piece of code does and why it was chosen (Design Decision).

5. Challenges & Gotchas

What are the common errors, limitations (Edge Cases), or Bottlenecks that he encountered and how did he resolve them?

6. Results & Next Steps

A screenshot or output showing the final result of the project.

A link to the source code repository on GitHub.

A call to action: "Share your feedback in the comments or connect with me on LinkedIn."

7.References

- add only specific url or another articles or research paper

8.Another advice

Visual Formatting: Use bold formatting and lists to make reading easier, and limit paragraphs to three to four lines.

Tags: To increase organic reach, select five pertinent tags (such as Python, Machine Learning, Data Science, Artificial Intelligence, and Software Engineering).

Copyright and Citation: Provide direct links to any research papers, resources, or libraries you have used within the content.

9.How to mention me

The student opens the article draft.

They click on the sidebar menu (three dots in the top right corner).

They select Add co-author.

They enter their Medium username (@gsamuel.cs) and select their account from the list.

The student can place a direct line under the subheading or at the end of the introduction:

"This project was developed as part of advanced technical training under the mentorship of [@gsamuel.cs]."

This approach lends immediate credibility to the article and directs readers directly to your profile and educational platforms. It also allows me to review and evaluate your article, as it will become a general reference for others in the future.

Be responsible, and together we will build a strong and useful researcher for society.
